Abstract:               The new world economy requires an organization with flexible information networks, not just control and power. They need workers who learn fast and are catalysts for their own and fellow work group learning. Today's work force, from the top to the bottom needs to develop the habit of lifelong continuous learning.

Jobs are moving abroad seeking a vast new supply of skilled labor. The average American doesn't realize that there is a truly competitive work force out there vying for the jobs. This paper examines the needs and options for retraining of the American work force and delivery techniques available.
