Type: Student Project

Note: This project is in the filing cabinet in the ETM department office.

Abstract: This project examines the problems associated with the close-out of the Bonneville Second Powerhouse Project. Questionnaires, interviews, and discussions with project participants who filled a wide range of roles yielded a broad spectrum of problems. These problems are compared with the typical project close-out problems identified in current literature. Although many external factors prevented timely close-out of the Bonneville Second Powerhouse Project, this paper provides recommendations to facilitate better project close-out in future construction projects.
