Report No.: See Above

Type: Student Project

Note: This project is in the filing cabinet in the ETM department office.

Abstract:                During this project we analyze the implications of sourcing a product from offshore locations, identify the criteria for globalization, and the justification for globalization. The effects of a global project on the typical project cycle and common pitfalls were identified and discussed. It was found that successful project management across national borders requires careful planning in the early phases of a project. The implications of dealing with foreign governments, cultures, languages, and unfamiliar political systems must be part of the original plan.
